

ID5: Tutorials given within the team and other investments in spreading knowledge

1. Tutorial/knowledge sharing on Java testing

Ralph went on a high level overview on how to write test cases in our Java backend. This involved how to structure tests, how to use mockito, naming conventions, mocking techniques and best practices to get amazing test coverage for each method we are testing.

2. Ralph gave tutorial to Kamal and Marcus about using postman to test newly created API routes. Video shared in team discord.
