ID2: Meetings with stakeholder Documentation

Meeting With Stakeholder

Meeting notes for January 31st

Priority is to get site running as is before changing too much or investing in new technologies.

300MB typical file size + 100MB per year of activity data (about 300mb started at apple watch 2)

Get backend working → and then can pitch something fun like Hadoop

Files should be stored in backend

> Data used for research - will need to disclose to users

> He prefers to have most stuff the same regard backend but if necessary we can do it

Research ethics: when user is signing up, user signs consent for research. Found in signup research. **Needs updating.**

The proposal for this research has been reviewed by the Interdisciplinary Committee on Ethics in Human Research and found to be in compliance with Memorial University's ethics policy. If you have ethical concerns about the research, such as the way you have been treated or your rights as a participant, you may contact the Chairperson of the ICEHR at icehr@mun.caor by telephone at 709-864-2861

©2020 BEAP Lab

Have two different (front-facing) users

researcher allow batch processing

basic user real time computing → maybe force batch processing if data exceeds a certain threshold?

We are removing the home button and redesigning site.

Meeting notes for February 5th

This was a meeting to get a clearer image of what Dr. Fuller views as a desired outcome of the design process.

What are some things he disliked about the looks of the previous BEAP engine interface?

major thing:

1) the user walk through interface is not very clear.

2) feedback on things that might take some time so the user is not just sitting there waiting not knowing what's happening.

    -if "leave site, progress will be lost" notification

    -maybe add some "processing" animation

desire: some sort of flow for the user to know that they should transition for the next page .

    -no automatically moving users between screens. Provide link and/or direction

in login page add some explanation on the blue side.

he doesn't see much value in the landing page, he doesn't mind it just being a sign in straight to file upload

The signup page looks good. just need updated colour scheme.

Meeting notes for February 7th

Review design

    Uploaded files are saved: these can be accessed under "My data" section in profile section

    New user profile page (ex change username and password) include my data section

    make progress bar be consistent with colour scheme

Industry standard

    → for user data (fitbit, watch data, etc.) security

    → user login maybe need to look into OAuth 2.0
